

# Kaseware for Special Events

## Trusted Technology for Large Scale Events

Supporting safe, secure, and seamless operations for event security

### From Fragmented Data to Unified Action

Major events like the Olympics, World Cup, and other large scale events pose unique, high-risk challenges. With crowds in the millions, diverse threat vectors, and overlapping jurisdictions, success depends on sharing intelligence quickly, visualizing insights clearly, and collaborating across every level of government.

Success in public safety operations hinges on centralized intelligence, investigative case management, and seamless cross-agency collaboration. Kaseware unifies these capabilities into a single platform, transforming complex security and investigative efforts into operational clarity that protects lives and critical infrastructure.

### The Kaseware Advantage

#### Unified Intelligence Access

Access critical data from multiple systems in one platform, no toggling or duplication required.

#### Real-Time Dashboards & Reporting

Visualize real-time metrics and trends for daily briefings and executive-level oversight.

#### Secure, Role-Based Collaboration

Securely onboard and involve stakeholders across varied clearance levels, jurisdictions, and agencies with granular access controls.

#### Situational Awareness Tools

Visualize incidents, tips, and activity across venues using maps and automated alerts.

#### Connect to Fusion Centers & External Partners

Integrate with pre-existing systems and networks, ensuring continuity across borders and agencies.

### Protecting People, Places, & Protocols Across Every Jurisdiction

Kaseware empowers agencies to manage large-scale events with clarity, speed, and coordination. By centralizing intelligence, visualizing insights through real-time dashboards, and uniting agencies under one platform, Kaseware supports every layer of response across cities, states, and international borders.

Built for complex operations the platform reinforces safety, ensures operational control, enhances service delivery, and brings every stakeholder to the same page.

### Unified Operations Through the 4SI Framework

#### Safety

Proactively identify and act on threats, like human trafficking, narcotics activity, and suspicious behavior, before they escalate.

#### Security

Maintain full situational awareness with dashboards that track incidents, tips, and metrics across venues and transit networks.

#### Service

Streamline operations and accelerate intel sharing, ensuring staff in the field and at command centers can act without delay.

#### Stakeholders

Facilitate collaboration across all partners, from Federal Agencies, local law enforcement, fusion centers, and more on a secure, access-controlled system.

### Elevating Security Through Unified Intelligence

Kaseware was purpose-built by former FBI Special Agents who have firsthand experience managing large-scale, multi-agency operations. Whether it's coordinating suspicious activity tips from thousands of attendees, or connecting disparate data across jurisdictions, Kaseware brings operational clarity to the most demanding events.

The platform is trusted by global law enforcement, fusion centers, and partners to support fast-moving investigations, cross-agency intelligence sharing, and compliance with data security protocols.

From managing field reports at a local fan zone to integrating threat data between international liaisons and state agencies, Kaseware gives your team the tools to act decisively, together.
