

Utilize the WAVR-21 Workplace Assessment of Violence Risk Form

Rising Workplace Violence

Assessing behavioral risk has become curicual as violence in the public and private sector is on the rise. The frequency of mass attacks in public places has tripled in the last decade, with 70% occurring in places of business. The fear of violence has also increased, affecting performance and morale, as one in seven employees feel unsafe at work. However, workplace violence prevention practices have evolved, and evidence-based assessment tools are driving inquiries.

The WAVR-21 Assessment Tool

The WAVR-21 – Workplace Assessment of Violence Risk – is a 21-item coded instrument to assess the levels of concern for violence risk for individuals in workplace and campus settings. First published in 2007 by its co-developers, Drs. Stephen White and Reid Meloy, the WAVR-21 reflects the authors' extensive case and forensic experience and a thorough review of the research and clinical literature.

Capitalize With Kaseware

When used in relation with Kaseware, the WAVR-21 Assessment tool adds to complex investigations and users can benefit from document management, case management, and data analysis features within the Kaseware platform such as:

- **Dynamic Documents**
The customizable drag-and-drop document builder creates unique and standardized forms and documents to exact preferences.
- **Link Analysis**
Analyze entities listed within a WAVR-21 form on a graph database to show connections through multiple degrees of seperation.
- **Geospatial Mapping Software**
Understand geographically driven problems by displaying location-based data within WAVR-21 forms such as ZIP codes, addresses, coordinates or cities.
- **Advanced Search Capabilities**
Quickly find any items living within Kaseware with advanced search capabilities that easily locate names, places, evidence, and more.
